Our logo:

Logo description:

The Mumahed logo is designed to show how we help fresh graduates start their careers.

The logo is a path, which means moving step by step toward your goals, and this path helps users find the opportunities and build their careers with confidence.

We chose green for the logo because it means growth, development and trust, green also makes users feel calm and positive when using the app.

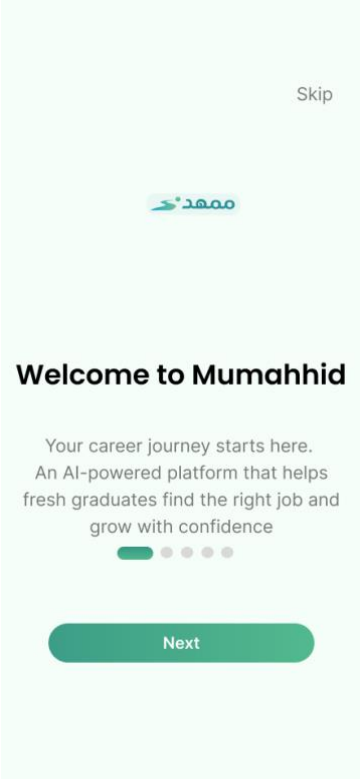

The logo is simple and clear so it’s easy to understand, a simple design is also modern and makes the app more user-friendly.

The Mumahed logo is about guiding graduates, supporting their growth, helping them get jobs, and showing our goal to help graduates enter the job market successfully. We want to support graduates at the beginning of their career journey through Mumahed.

It helps users find opportunities and build their professional path.

The system tasks:

For Fresh Graduates:

1. Fresh graduates can sign up using their personal information to create an account.
2. Fresh graduates can log in to the system.
3. Fresh graduates can create or upload their CV through the system.
4. Fresh graduates can view job details before applying.
5. Fresh graduates can apply to multiple jobs easily.
6. Fresh graduates can track the status of their applications.

For Employers:

7. Employers can create an account in the system.
8. Employers can log in to the system.
9. Employers can post job vacancies by adding job details.
10. Employers can view graduates profiles and CVs.
11. Employers can review and compare applicants.
12. Employers can manage job postings and track applications.
13. Employers can accept or reject applicants.

Interaction styles:

1. Clicking buttons: Users use buttons to perform actions, such as logging in, signing up, going back to the previous step, and creating CVs.

2. Filling forms: Users can add their information details, such as name, account type, email address, password, and phone number.

3. Scrollable content: Users can scroll down to see more information about the career journey like exploring jobs, and see the recommended courses.

4. Titles: titles on the top of the pages will make it easy for user to understand the main idea of the selected page.

5. Icons: small pictures used to help users understand features quickly and easily, such as applications icon, location icon, phone icon.

6. Social login buttons : Users can sign in using their Google or Apple accounts quickly without creating a new account.

7. Chat interaction :Users can interact with the system by chatting the AI Advisor and asking questions about their CV, The system provides suggestions and helps improve the CV.

AI Evaluation (UX Analysis):

The Mumahed application demonstrates a clean and structured interface that supports easy navigation across different sections such as job search, applications, and CV building. The overall layout is consistent, and the use of card-based design allows users to quickly scan and understand information. This is especially helpful for fresh graduates who may be unfamiliar with job platforms. The AI analysis identified several strengths. The application simplifies complex processes such as job searching and applying by breaking them into clear steps. Features like “Entry-Level” filters and application status tracking improve usability and reduce confusion. However, some usability issues were detected. In certain screens, action buttons like “Apply” appear too early in the user journey, which may lead to unclear user decisions. It is recommended to replace these with “View Details” where appropriate. Additionally, visual hierarchy can be improved. Some elements do not stand out enough due to similar font sizes and low contrast, which may affect readability. The filtering system is effective but could be simplified further to reduce cognitive load and make interactions faster. Overall, the AI evaluation concludes that the application is user-friendly and well-structured, but would benefit from improvements in consistency, hierarchy, and action clarity.

Usability Evaluation:

We looked at the Mumahed application to see how easy it is for people to use it. The main thing we wanted to do was make the Mumahed application easier to use for people who just graduated and may not know much about job platforms.

The Mumahed application is designed in a way that's easy to understand. People can go from one page to another like the Home page the Jobs page and the Applications page without getting confused.Also helps people get things done quickly.

For example they can look for jobs read about them and apply for them without having to do a lot of things. This makes the whole process faster and not as hard to understand, people can see if their application is being looked at if it has been accepted or if it has been rejected. Overall the Mumahed application is simple, easy to use. Really helps people who just graduated.
